

## CAPSLink 2.0.6 Release Notes

---

- Some customers reported that they could not print the final label after validation. This has been resolved.
- Clinician users were not able to edit a previous days order without clicking edit and closing/reopening the order. This has been fixed.
- Clinicians users should now be able to print the Sample Label Report.
- View errors was empty after reopening a validated order and then opening the CaPhos or Order Summary screens. This has been fixed.
- Customer will now be able to access the Order Profile before validation. The CaPO4 curves or Order Summary must be opened first to force balancing of the order.
- A user will now be able to completely delete an ION value from the Base Elements area of the Order Entry screen. This will allow the user to then enter the ion as a salt in the ingredients section.
- Order List columns are now sortable
- Patient order history sorted, with most recent order at top of list
- Color coding for Order Status has been added
- Override checkbox is now checked by default for orders that contain no validation errors
- A user can now navigate the ingredient section of Order Screen using Arrow and Enter keys
- Order information was not updating automatically on the Order List when the user closed the order using the "X" in the upper right. This has been corrected.
- The Navigation bar has been updated to be more responsive when rolling over with a mouse.
- The signing buttons were not visible sometimes for CSOS customers where one user places orders for multiple sites. This has been corrected.
