

CAPSLink 4.0 Release Notes

CAPSLink 4.0 will be released Wednesday Oct. 18th. This release will update the version of Angular from version 5 to version 13. Angular is the framework used to develop the CAPSLink user interface (UI). This upgrade will give our programmers new tools for developing and improving the UI. There will be no enhancements or bug fixes to the CAPSLink application in this release and the transition from your perspective should be seamless.
